NOTRE ACTIVITÉ

Enterosys est une société de biotechnologie spécialisée dans l'évaluation de l'efficacité d'actifs de haute qualité, à visée thérapeutique ou de soin.

Notre plateforme unique offre une large gamme de tests de précision *in vitro* et *in vivo*.

Enterosys in a dynamic ecosystem

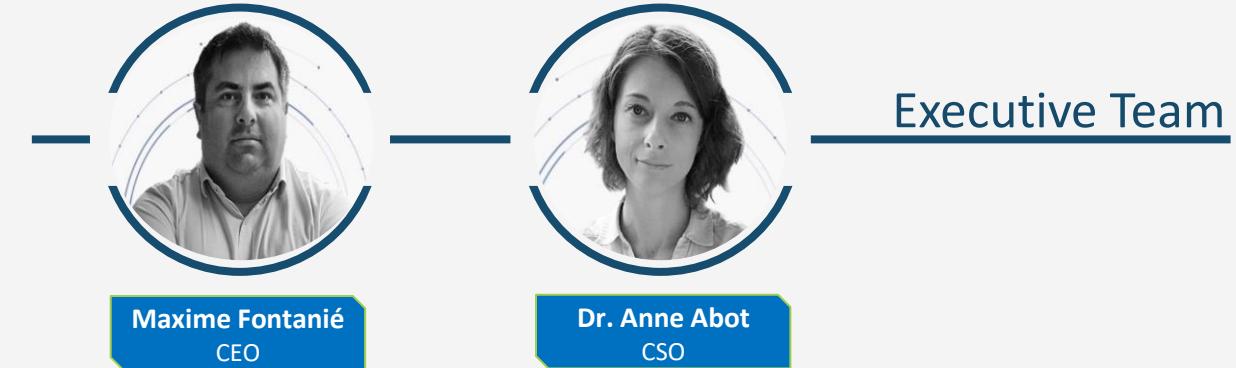

- Biotech company created in 2017
 - Located in Labège (near Toulouse)
 - In a center dedicated to innovation
(Prologue Biotech)
 - Animal facilities (ethic protocol, 3R)

Les membres AFSSI ont la parole

Enterosys, experts at your service

- Multidisciplinary team
- Strong entrepreneurial commitment
- Creativity & inventiveness on behalf of innovation

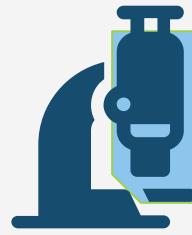

Advisory Board

Les membres AFSSI ont la parole

Enterosys contributes to the health research effort

Our clients

Our technological platforms to create innovation opportunity

**EasyGut
platform**

- Gastrointestinal functions
- Functional screening on pathologic models
- Duodenal Peptides biobanks (Human, Mouse)
- Drug discovery in Gut-Brain axis pathologies

**EasyRox
platform**

- ROS / RNS release in real time
- Biomarkers analysis (qPCR, ELISA, biochemical assays...)

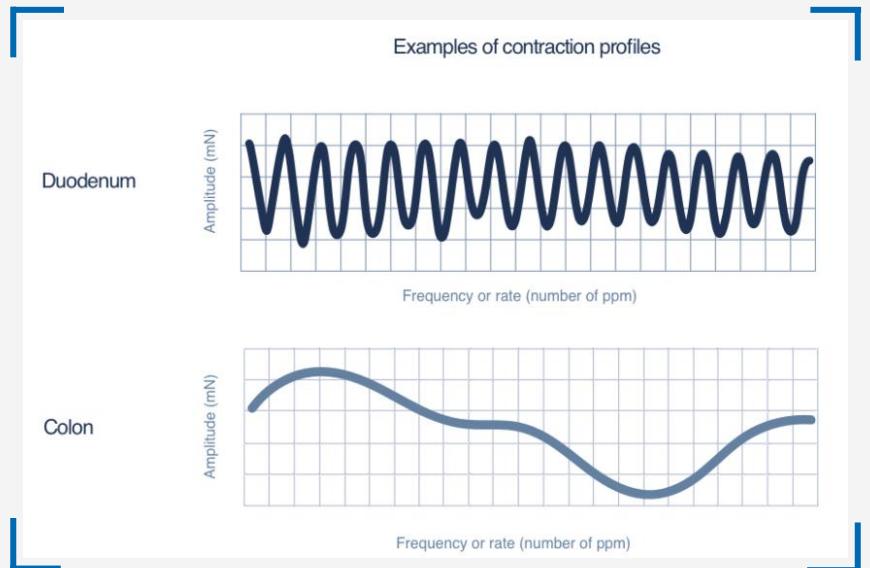

EasyGut platform

Applications and claims

- Screening of compounds (formulation, prebiotics, probiotics...)
- Identification of the targeted intestinal segments (duodenum, jejunum, ileum and colon)
- Characterization or consolidation of the therapeutic effects
- Characterization or consolidation of the mechanism of action involving the enteric nervous system
- (Re)positioning of your compound

Gut motility

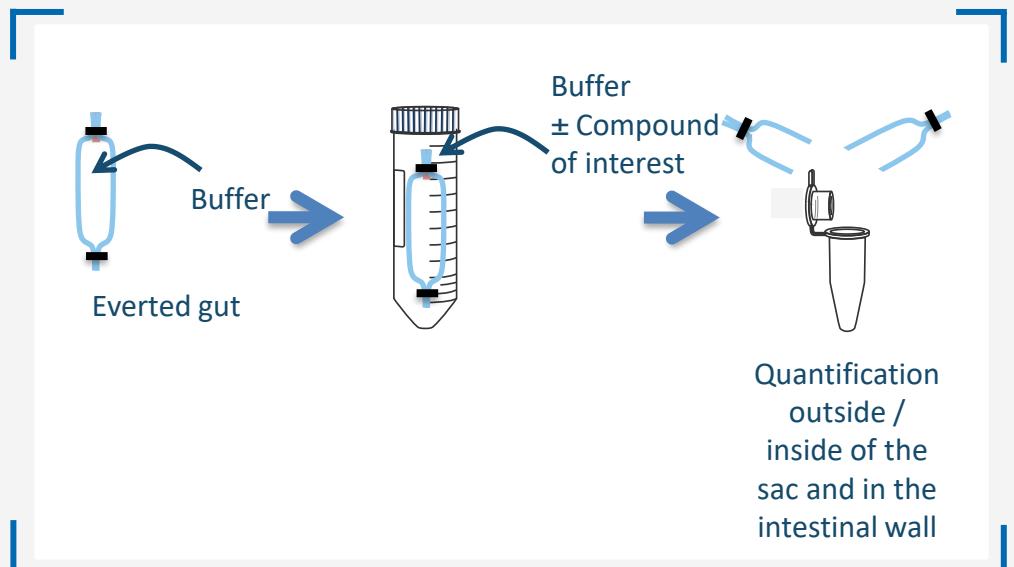

EasyGut platform

Applications and claims

- Everted small intestinal sac model
- Permeability assay
- Screening of compounds (formulation, prebiotics, probiotics...)
- Identification of the targeted intestinal segments (duodenum, jejunum, ileum and colon)
- Assessment of epithelial barrier selectivity / transport of bioactive compounds across intestinal wall

Intestinal Absorption

Les membres AFSSI ont la parole

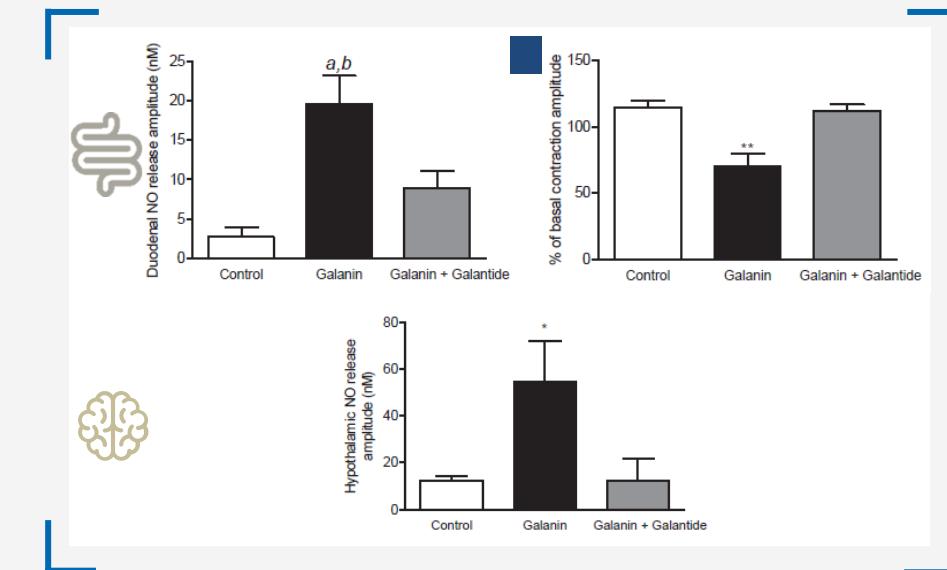

EasyGut platform

Applications and claims

- Neurotransmitter release
- NO is a major neurotransmitter
 - => in the gut: impact on activity of enteric nervous system and gut relaxation
 - => in the hypothalamus: impact on the regulation of autonomic nervous system

Gut-brain communication

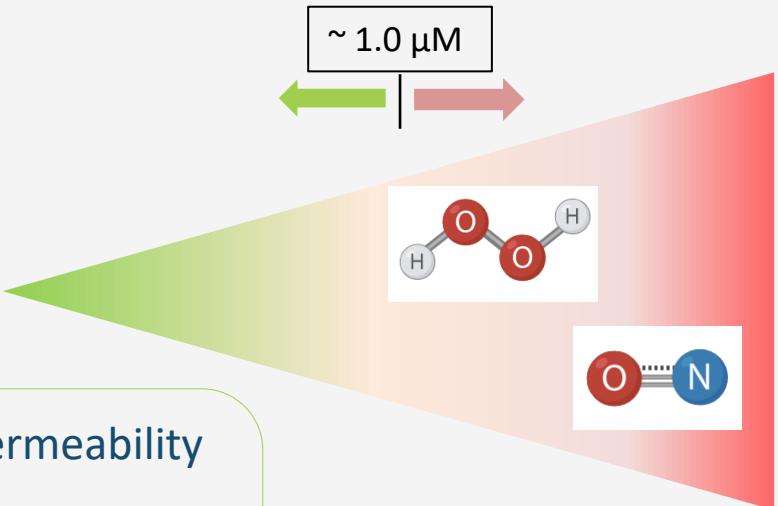

Abot A. et al., Mol Metab 2018
(Other data involved gut microbiota Abot A. et al, Gut 2020)

Les membres AFSSI ont la parole

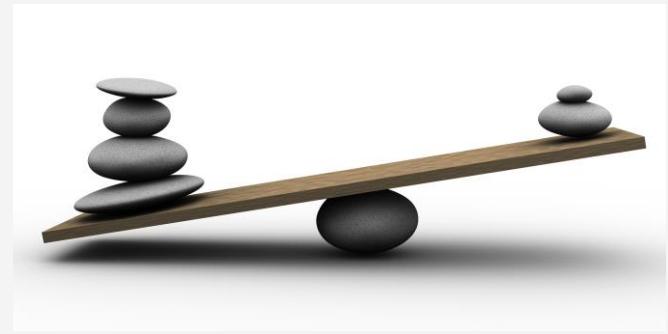

EasyRox platform

- Vascular tone & permeability
- Neurotransmission
- Immune system
- Cell growth, migration
- Chemotaxis

ROS/RNS: Predictive Biomarkers of Toxicity

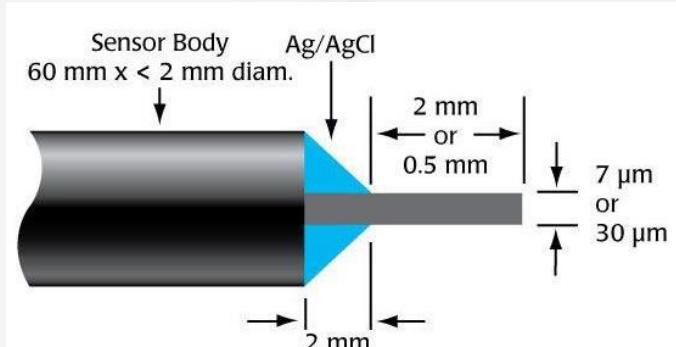

- Lipid peroxidation
- DNA damage
- Protein/enzyme dysfunction
- Apoptosis
- Mitochondrial stress

EasyRox platform

- Highly specific amperometry probes to selectively measure NO or H₂O₂
- Exquisitely sensitive at physiologic levels
 - From 0.2 nM to μ M
 - Accuracy 1-10 pA/nM
- Real-time, continuous direct measurements
 - Up to 10 measures/second
- Validated against Western Blot and Amplex Red

ROS/RNS: Predictive Biomarkers of Toxicity

Les membres AFSSI ont la parole

EasyRox platform

Applications and claims

- *In vitro / ex vivo / in vivo* models
- Assess antioxidative effects of your hits in physiological and pathological states
- Perform a (re)positioning study and compare the efficacy/protection of your compounds to a standard
- Develop a screening assay to treat a pathology with an innovative approach

Les membres AFSSI ont la parole

EasyRox platform

Applications and claims

- NO and H₂O₂, as biomarkers involved in skin homeostasis
- Biological models: 2D or 3D cell culture, RHE, Explants
- Assess antioxidative effects of your hits (aging, skin barrier, integrity...)
- Perform a (re)positioning study and compare the efficacy/protection of your compounds to a standard
- Develop a screening assay used in medical research suitable for dermocosmetic

Dermocosmetic

ENTEROSYS, as Lab Accelerator

Our expertise in the science of precision health

CUSTOMIZATION

Tailor-made protocol design
Innovation opportunity

INNOVATION

Original technologies
Adaptability according to the needs of our customers

PERFORMANCE

=> Real time analysis
=> Save time and development cost
=> Accelerate the timeline to drug approvals
