[JOB DETAILS](#)

Motac is looking for an enthusiastic Study Director for preclinical studies in the field of translational neurology for its Bordeaux site.

As a project leader, the Study Director is responsible for the execution of preclinical proof-of-efficacy studies. In line with client requirements, he/she will manage the conduct of non-GLP in vivo preclinical studies in rodent and non-rodent species, including study design development, managing the team execution of the study, compiling documentation, collecting, analyzing and interpreting study data and writing scientific study reports.

The Study Director ensures documentation and execution of the study in compliance with internal procedures and in alignment with any quality standards by collaborating with support functions (quality assurance, documentation...).

Motac is a preclinical service provider with facilities in France and China. Motac offers a wide variety of study designs which opens numerous opportunities to tackle scientific and technical challenges that stimulate curiosity and demands professional commitment.

Qualifications:

- Experience in managing experimental life science studies in Contract Research, Pharmaceutical, Chemical or Biotechnology Organizations is appreciated.
- Technical expertise in preclinical neuroscience.
- Experience in internal or external client management through result presentation and discussions based on scientific reports and/or publications
- Experience in working in an environment with high-quality standards (such as GLP, ISO...) and established testing facility operations and procedures.

Education:

Master's Degree (Science, Quality control, ..)

Skills:

Excellent technical writing and computer software skills.

Leadership and good interpersonal relationship skills.

This position requires the ability to speak, write, and read English.
